{quote} I did a major in finance so I am pretty familiar with "fundamentals". I trade based on conviction and trust. Fundamentals was never in the equation other than indicate potential volatile knee jerk reactions at news release times. Most of my peers share my view on the value of fundamentals in asset valuation. If only it worked as it should. Price and time analysis is my method.

I agree totally...I was being **tongue in cheek somewhat**....my only point is regarding fundamentals is this....Know your currency, Know how it reacts to news events.....Know about its current interest rates and so on...in other words be aware, otherwise you just trading price and that is not enough...had you been short when that news came out this morning, even your stop would not have saved you because it was like a flash...and you would not have got out until the very top...

EU - the time & price projection for today. Spot on precision. {image}

Honest question...can you elaborate on your chart...how you **arrived** at the "spot on precision"? The blue zone...did you elaborate on that earlier...can you refer me to your post on that....It could help me and others in your analysis...

{image}

My major is in **protecting my account** like a junk yard dog....I dont accept sloppy management that leads to loss...I have an allergy to loss...

Yes please teach us how to expect things happen at some time, That would be like a great skill to learn not to look at the computer all the time haha!

Courtesy of TradingView.

By drawing the blue vertical up to the end ! 😂

By the way it is the essence of converting Price in Time !

{quote} Here's the step by step pics how I build and align that chart in London market based on the impulse wave. It tells the level and the blue rectangle tells the projected time of activity - price and time analysis. All my charts is done the same consistent way. With pb channel overlay. <https://www.forexfactory.com/showthread.php?12776511> {image} {image} {image} {image}

Thanks a ton for your post...now I get it.....one question...what are the vertical lines...

Thanks parisboy....so can you elaborate on the horizontal lines and the vertical lines you placed on your chart...how you arrived at the measurements... would those be Time Conversion Bars...?

{quote} Thanks a ton for your post...now I get it.....one question...what are the vertical lines...

Fib zone divided into 8 segments, I removed the peripheral lines to keep it cleaner and focus on the center.

{quote} Thanks parisboy....so can you elaborate on the horizontal lines and the vertical lines you placed on your

You have a Top labeled T and a Low labeled L. The distance between the Top and the Low is the Measured Move CD.

Then you project this vertical Price Measured Move CD horizontally on the Time Axis from the Top T and from the Low L.

This gives you 2 Time projection possible for the next move.

In fact you have a "Timing" - you do not know if it is a Top or a Low , and of which nature, degree. Price Action will tell us.

You have a Pivot in Time

Thanks, BWilliam. Is the fib zone an indicator, or is that manual? Couldn't find it, if it was. Thank you.

It's a mt4 drawing tool, fib time zone.

Reworked the Trend by Angle indicator. This version can adjust the "anchor point" of Up angles and Down angles separately and also rotate each Up set and Down set separately. You can also have more than one iteration by changing "SetIdent" \$image\ \$file\ Fulla

it's the length and swing fro an angle.

Being able to draw a swing about a chart is very useful

Here is a tip I use all the time AFTER and unusual move...or a big move that is starting to retrace....I use my blank chart and simply place the Jenkins Secret Angle script on it.....and it provides a roadmap.....I did not take the long because I was enguages in a talk with someone but had I been able to be at my computer I would have taken the long...where? Right at the bottom of the JSA...a perfect place to take the long....I did get a bunch of the short though... \$ 😎 {image}

The JSA starts quite close to the bottom of octave 6, at least as I drew it. And the 6 had been touched multiple times since 2/21 typically as a price inflection. So a long about here would seem to make sense using the standard tools

Absolutly...same octave as yours.....has to be readjusted now because of the breakthrough but your right on...

Now when I use the JSA I use a bare chart...less confusing and easier to concentrate on the price movement....now how easy is this chart to see the entry points...its a perfect, clean, clear decision chart...imho

One of the things I really like about this tool on my 15 min chart...**I do not have to scale the chart...**leave the chart as is and time and time again it has proved accurate...

{quote} Would you be so kind as to explain this operation in more detail? Thanks {image}

Please what is this indicator?

Feb 26, 2020 11:11pm | 420

Swede[Quoting edlivre](#)

{quote} Please what is this indicator?

If you are going to understand some of Jenkins, then you will need this SCRIPT....it goes in your script folder, not your indicator folder. It is a method perfected by Jenkins called the Jenkins Secret Angle that measures a move and half the move or impulse wave. You will find the download on post #9 in this thread.

Read the books provided to understand what it is about...
